Category	Doesn't Meet Expectations	Meets Expectations	Exceeds Expectations
Functionality	Displays errors that "break" the app with minimal use. Inoperable features are exposed. App is not deployed to heroku	Displays no errors with minimal use. Inoperable features are hidden. Deployed to Heroku	Displays no errors or controls for unexpected user input. Deployed to Heroku with a custom name or domain name.
User Interface	A readme or walkthrough is required for use (although not necessarily provided).	Intuitive; an uninformed user could be expected to operate the app.	Intuitive and visually appealing.
Maintainability / Code Quality	Naming and indentation are unintuitive or inconsistent. No comments. Rendered HTML and CSS fail validation tests.	Naming and indentation are fairly intuitive and consistent. Code comments describe less-intuitive methods. Rendered HTML and CSS may fail some validation tests.	Naming and indentation are intuitive and consistent. Code comments describe less-intuitive methods. Code is properly encapsulated and modular. Rendered HTML and CSS pass validation tests.
Evidence of Comprehension	The app does not interact with an internal database, nor an API.	The app uses appropriate techonology to solve problems faced (including User Authentication, 3rd Party APIs, gems, etc).	The app solves a complex problem with appropriate technology and incorporates TDD.
Presentation	Presentation doesn't clearly convey the objective of the application and/or presentation doesn't make effective use of time or is not polished.	Presentation clearly conveys the objective of the application, demonstrates the functionality, and highlights interesting code or solutions.	In addition to meets expectations criteria, all members contribute to the presentation and can justify their decisions.
